HURRICANE  
-V120Swim-

OUR CUSTOMERS SPAS

Tropicspa® only produces All Weather Spas, with Triple walled cabinet insulation system known as "dead air space" insulation:

- The interior is insulated with high density foam (shell as cabinet interior) + glass wool
- All the cabinetry panels are insulated with doubled faced aluminium sheet
- Some models are equipped with a thermal insulation bottom plate for an extra layer of protection.

The advantages of "dead air space" insulation are:

- Easier to see the spa parts and service
- Prevent the spa from freezing in an extended power outage
- All the electronic parts are protected and all the heat generated is reused in spa functioning,

saving you some money and keeping your conscious green.

#### Hot tub structure

Stainless steel is one of the most durable materials used today. Made up of low carbon steel, which contains chromium, Stainless steel does not deteriorate. Because stainless steels are inherently corrosion resistant, no protective coatings are needed, and the adverse environmental impact associated with coatings is eliminated.
